

Summary of Integrity Insitu Stakeholder Feedback and Reservoir Containment Team (RCT) Response on Technical Reports				
Section	Stakeholder Feedback - Issue	Possible Solution or Recommendation	Rationale to Support Solution or Recommendation	RCT Response
Section 6, page 6	DFIT referenced in multiple locations in both documents, this is a proprietary term specific to Halliburton	Replace all DFIT references to mini/micro-frac test	Current wording suggests that Halliburton’s DFIT process is a requirement, when the data that comes of a mini/micro-frac test is what’s required. The AER isn’t intentionally directing the industry to use Halliburton for these tests, but by using the term DFIT, some may interpret this literally.	The RCT did not intend to suggest that industry must use only Halliburton for conducting these tests.
